

Description

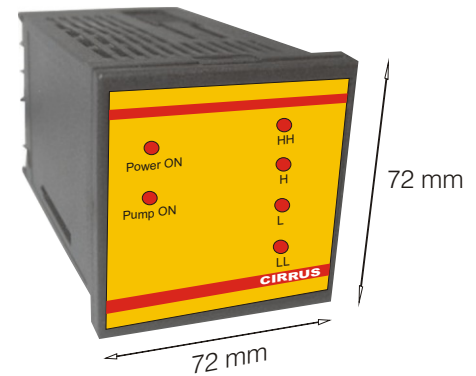

CLS2-C level controller is a versatile used compact level controller unit which can be configured with optional Cirrus level sensors & switches for level controlling. Separate supplied level sensor having Low & High level set points can be wired to this controller unit and relay outputs are achieved in these controllers, which can be further used for controlling of pump, dry run protection or alarm etc. One main control Relay has in-built hold-on circuitry arrangement & gets ON upon reaching low level & gets OFF upon reaching high level. Relay re-energises again only when low level reaches inside the tank.

Controller is of DIN rail mounting or panel mounting design, can be mounted on DIN rails inside panels or on front side of panel doors by making a suitable cutout, alternately can be wall mounted though mounting holes provided at its side. LED indications are provided on its front, for level indication, Relay-ON & Power-ON indications. Due to its compact size, efficient electronics arrangement it is widely used with different level sensors for level controlling inside tanks. Relay output can be configured by client to the pump motor's starter control panel or contactor coils.

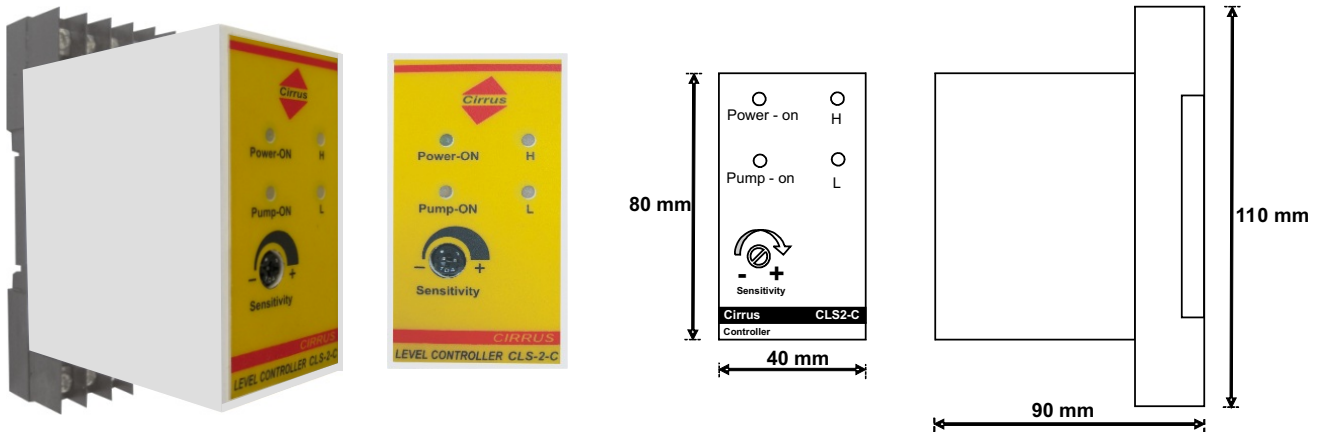

Specification

MODEL	CLS2 - C
Mounting	DIN RAIL / Panel Mounting
Contact output	Potential free contact relays
Contact rating	SPDT, 5 Amp.
Power supply	230 V AC
Input	From level sensor - (level sensors optional)

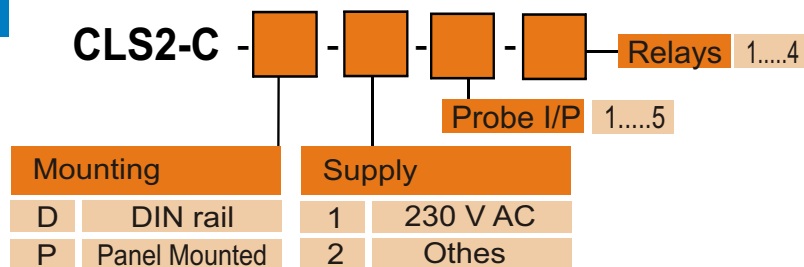

1. Controller (Panel Mounted) Model : CLS2-CP

2. Controller (DIN Rail Mounted) Model : CLS2-CD

Model Selection

Above Controller does not include Level sensors. Cirrus Level sensors can be optionally purchased separately. Separate level sensor with low & high level sensing points to be connected to the input terminals of above controller

Contact us for other models & specifications not listed here. Due to product enhancement technical specification may vary
